Protection & Gloss values when used with Clean and Protect

POWERFUL CLEANER – Rapidly removes compound and masking tape residues, fingerprints and dust – but also harsher contaminants such as birdlime – from paint, glass, rubber and plastics.

GLOSS ENHANCER – Creates a friction-free layer enhancing clarity and the depth of glossy surfaces.

PROTECTIVE BARRIER – Adds a silicone-free layer of protection to the surface which provides long lasting water beading and easy-clean properties.

Size	Part No. (SGA UPC)	Ctn. Qty
1 L / 34 fl. oz.	CAP101 (780727 66935)	6 bottles

HOW TO USE CLEAN AND PROTECT

Clean and Protect is versatile and can be used on all paints*, gelcoats, glass, trims, rubbers and plastics. Can be used on satin and matt finishes, as well as gloss paintwork.

** on the flattest of matt finishes, exercise caution and test first on an inconspicuous area.*

1. Spray liberally onto the surface.
2. Use a clean, microfibre cloth to immediately wipe off polishing residues, glue lines etc.
3. Using a 2nd clean, dry microfibre cloth, buff the surface.

- *For tougher contamination like birdlime, allow the product to dwell for a few seconds before wiping.*
- *If left and dried on the surface – wet with more product.*

TECHNICAL INFORMATION

Appearance	Opaque Blue/White
VOC Content	≈ 0 g/L
Relative Density	1
pH	8.7

Farécla | SURFACE FINISHING SPECIALISTS

FREQUENTLY ASKED QUESTIONS

What is CLEAN AND PROTECT?

CLEAN AND PROTECT (Part No. CAP101) is a powerful cleaner that has the added bonus of enhancing the surface and adding a degree of waterbeading that is surprisingly long lived for a product of this kind.

What surfaces can it be used on?

It's a very versatile product. Use it on gloss and satin paintwork, on most matt finishes, glass, plastics and rubber.

How do you apply it?

It's a "wipe on, wipe off" product. Spray liberally onto the surface, use one microfibre to wipe off polishing residues glue, lines etc., and another, clean dry microfibre to buff the surface. For tougher contamination like birdlime allow the product to dwell for a few seconds before wiping.

Can it be machine applied?

No, CLEAN AND PROTECT is for hand application only, preferably using 2 cloths as described above.

How does CLEAN AND PROTECT differ from glaze?

Glazes don't clean – the surface must already be perfectly clean before you apply a glaze. Glazes are often machine applied, and it's generally a longer process. That's in part because you have to take care when applying them – in common with waxes, they can leave a white residue on textured surfaces or in small grooves e.g. between panels and headlight rims. That's not an issue with CLEAN AND PROTECT, so it's very quick and easy to use. Also, glazes contain solvents whereas CLEAN AND PROTECT does not, in fact it is entirely non-hazardous with zero VOC content and of course no silicones.

I previously used Farécla's G3 Pro Bodyshop Detailer – is CAP101 different?

Bodyshop Detailer (Part No. GDU501) is a solvent-based cleaner only. It evaporates leaving nothing on the surface, so no element of protection – unlike CLEAN AND PROTECT. You can smell the solvents in Bodyshop Detailer whereas CLEAN AND PROTECT has a pleasant bilberry scent. Bodyshop Detailer is very clearly outperformed by new CLEAN AND PROTECT so is being withdrawn from the range and replaced by the new, superior product.

Why is it branded Farécla CLEAN AND PROTECT and not G360?

Being super fast and super easy, CLEAN AND PROTECT is a perfect complement to the G360 Super Fast polishing system, but it's also very versatile so can be used equally well in conjunction with other Farécla compounds, like G3 Liquid or Paste or G3 Premium. Similarly, CLEAN AND PROTECT is great on gelcoat and other industrial surfaces for those using Farécla Profile compounds. Hence it carries the overall Farécla brand name.
